*If project will be ongoing during the wet season, a Wet Weather Erosion Control Plan must be submitted			

CERTIFICATION

As the architect/engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs should be installed, monitored and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity.

Signature of Project Architect, Engineer
of Record, or Qualified Designee

Printed Name Title Date

"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the LSWPPP to reflect conditions, or failing to properly and/or adequately implement the LSWPPP may result in revocation of grading and/or other permits or other sanctions provided by law

Signature of Landowner,
or Landowner's Agent

Printed Name Title Date

[If not an individual landowner, a responsible corporate officer (for a corporation), a general partner or proprietor (for a partnership or sole proprietorship), an elected official or a ranking management official (for a municipality or public agency) may provide the signature required.]

BEST MANAGEMENT PRACTICES USED TO CONTROL RUNOFF FROM CONSTRUCTION ACTIVITIES

(Include rationale for selecting or rejecting BMPs)

What Treatment Controls or Structural BMPs are used on-site for retention of sediments that have been generated during construction activities?

What is being done at the site to prevent construction-related materials, wastes, spills or residues from being discharged into the streets, drainage facilities, receiving waters or adjacent properties by wind or runoff?

How is non-storm water runoff from equipment and vehicle washing contained at the project site?

What BMP combinations are being used to control erosion from slopes and channels?

Describe any anticipated reasons for not using BMPs as listed in attached table 2.2 (Stormwater Pollution Controls for Construction Activities)

Attach site plans showing the location of all preserved vegetation areas and structural or treatment BMPs

*Attach additional pages as needed
